

## Classroom Skills: Behaviour Management

Mr Jude Hennessy Director20j CCD Diocese of Wollongong

Student Workbook

## **CCRESS**

CATHOLIC CONFERENCE OF RELIGIOUS EDUCATORS IN STATE SCHOOLS

Session Teacher Mr Jude Hennessy, Director of CCD Diocese of Wollongong

## Session Overview

Notes

This unit outlines some of the basic techniques and strategies used by teachers to create classroom environments where student behaviour is conducive to good learning. It will examine some of the common student behaviours that disrupt classrooms how the SRE teacher can respond appropriately to create positive learning environments and outcomes for all students.

Reading 1 - Collaboratively developing Expectations with Students (written by Jude Hennessy) Often when discussing with students what the expectations of the classroom will be, you'll find the students are tougher on themselves

than teachers might be. An important part of classroom management is understanding the need for clear consequences for students. Individual schools will have really clear guidelines on what the expectations are for student behaviour and so cooperating with the school's rules is really important for Catechists. Remember, there should be no favorites in the classroom; whether it is a student who is really struggling; a student who has shown poor behaviour in the past; or a student who does the right thing all the time. It is important that Catechists respect and care for, as well as desire the best learning outcomes for all students. Another really important part of teaching is establishing routines for all phases of the lesson. Within the limited time that you have as an SRE teacher, you will have to manage many things as part of your lesson plan, but clear routines for such things as entering the room, the way you sit down, the way you greet each other at the start of a lesson, the way you finish a lesson, the way you hand out books, all of these things are important so that the students understand expectations. Essentially, any time there is movement in the class room, there is the danger of disruption, so having clear expectations of behavior and of routines is really important. Mapping out your lesson so you know where the lesson is heading, not just for yourself but also for students, is also vital. If students understand the sequence of what's going to happen in a lesson, they're much less likely to get distracted.

Make sure when you enter the classroom that teaching aids are close by and ready to use as any time you need to pause to organize yourself for a lesson is an opportunity for something to go wrong with student behaviour. Really importantly, at the start of every lesson, you should welcome the students and let them know that you enjoy being with them. Be positive and look to affirm good behaviours in students, don't simply find the bad things that one or two students might be doing. Establishing routines, particularly routines for the start of the lesson and at any time of movement during the lesson, is very important. Reiterating this with students, particularly at the beginning of the year, will ensure that you're clearly establishing expectations for the whole year.

Reading 4 - Features of Good Questions (written by Jude Hennessy)

What are the features of good questions? Good questions are not repetitive and they show that students have been listening. They help us individually as learners, while also helping others in the classroom. While you can expect that sometimes you will need to clarify things for students, questions often come about because students haven't been listening. This is an opportunity to remind the students of the expectation to listen effectively. Good questions are not meant to disrupt the classroom. So if you get a sense of that happening, please avoid the question and come back to the topic in the classroom. Good questions are always asked politely, so ensure that the students use words that are polite and show respect for the individual. Really importantly, you might have to teach some students what sort of words need to be used in asking questions. Words like who, what, when, why and how are all important ways of asking a question. Teachers should allow time for good questions, as they are an essential part of a good learning environment. It would be important in your lesson planning, particularly when you're beginning teaching, to refer to some of the questions that are outlined in your teacher manuals, or if you have specific questions that you want to address, write them down and make sure that you lead students into answering those questions. Also, a good teacher, in preparing for their lesson, might try to predict some of the questions that are likely to come out of the content and the discussion.

Following Instructions	
Reading 5 - Following Instructions (written by Jude Hennessy) Following instructions well, involves a number of elements for students. These include listening well and as a part of that, being repeat, list, read or even write down instructions. Students who follow instructions will be more likely to start on time, stay focu will use the time set for a particular task, properly. Good teachers remind students during the lesson, about the importance of s focused on the lesson, avoiding distractions and not being a distraction to others. By following these instructions as a group, the can move forward. Self-evaluation by the students of their achievement in any particular task also helps them to grow in their understanding of expectations. A good teacher will have clear expectations about all of these things and how the students follow instructions in their classroom. When beginning teaching, it would be really important as part of your lesson plans, to clearly lift for yourself, and to articulate to the students, the clear instructions associated with each of the tasks that you have set down for weekly lesson.	cused an staying e class · w ist
Sharing	
time well so that it doesn't stop the learning of others. Another element to sharing is sharing the learning space. This means that students understand the importance of sharing the line-up space, bag space, the place on the desk that's been allocated to them, space around them and the space set aside for activities. It is important to be aware of what we do with our body movements, we other people are and what they're doing, making sure we act safely in our group environment. Avoiding rushing at all times is a important part of sharing space. Linked with this, is making sure that students don't move around the room unless they've been directed or given permission by the teacher to do so.	the floo where an
Sharing friendships is vitally important for students and a real learning opportunity, particularly for younger students. No-one dominate another person's time in a way that excludes others, whether it is in friendships, with the teacher or helper. So ensuring students have an understanding of sharing the resources of people, is important for them and an important part of classroom management. Sharing things like books, paper, pencils and art materials are also very important and are all required of student classroom setting to ensure that tasks get done, particularly group work tasks. Returning anything in good condition that stude borrowed, whether they are things from school supplies or from their friends or the group in the classroom, is a natural part of so sharing involves a number of things. Important in this is understanding the concept of "My Space" and not interfering with a peoples' space. Good sharing means a student won't touch other students or their things without their permission. They will us well, are not wasteful, are patient, polite and ask nicely when borrowing things from other students. A good teacher will have consequences when this doesn't occurrence they'll also write into their lesson plan, clear directions for sharing, particularly in a group work setting.	ng that  its in a  ints hav  sharing,  other  se thing  lear

Tips for Success					
		1.00	-	8	
	,		3		
			1		

Sometimes one of the best techniques we can use in correcting students behaviour is to find a student or students doing something good. Perhaps it's finding the student in your class who's continually being disruptive doing something that's good, and making sure that you recognize it and that you're very happy with their good behaviour. It's important for teachers to recognize when behaviors in the class room are starting to go a bit wrong, prior to things going really badly wrong. 'Nipping things in the bud' means being aware of what's

Reading 9 - Basic tips for managing behaviour (written by Jude Hennessy)

Reading 11 - Some more tips for good classroom management (written by Jude Hennessy) Without a doubt, pre-thinking your reactions to situations; pre-thinking how you will speak and the consequences for behaviour that you know are coming, is an important way of dealing with student behaviour. As we've said throughout, knowing your school, the expectations and what happens with particular behaviours, is really important and so asking the school to give you a simple, clear list of expectations of students that you can use in your class room is really important. Finally, we always need to be flexible with students, with ourselves and sometimes, as the situation demands, we do need to be able to bend the rules a little bit, to ensure that we get the best outcome for students. There's a really clear link between classroom management and child protection. The behaviors we exhibit as teachers are often linked to the safety of children. We have an expectation on us that we treat children justly and fairly and that they always feel safe in our presence. The only thing we truly have control over is our own behaviour. You obviously would expect that if you're teaching for long enough, you're going to have students who are going to test you out. Don't be surprised when it happens, but when it does, you have to have really clear expectations of yourself and your own behaviour. You would have learned in the Child Protection module, "Hands off, no corporal punishment, it's not necessary". All of these things are a violation of the law and of Gospel values. In the same way, our use of voice and gesture and body language is critical in making students understand that we have respect for them. We should never shout at a student, make threats, intimidate, use sarcasm, name-calling or belittle students. Those behaviours never have a place in any teaching environment, least of all SRE, where not only are we teaching students about our faith, but living out our faith as true witnesses of people who are called to love others. We've got to respect the physical and emotional space of students and respect arenas of safety and personal space. Linked with respecting these arenas of safety is making sure that we're never alone with any student particularly when we're managing classroom behavior or disciplining a student.
